

ONLINE INTERNSHIP INFORMATION PORTAL

AI23431- WEBTECHNOLOGY AND MOBILE APPLICATION

MINI PROJECT

REPORT

SUBMITTED BY

YOGESHWARI P – 2116241501254

in partial fulfillment for the award of the degree of

BACHELOR OF TECHNOLOGY

in

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

DEPARTMENT OF ARTIFICIAL INTELLIGENCE

AND MACHINE LEARNING

RAJALAKSHMI ENGINEERING COLLEGE

(AUTONOMOUS),

CHENNAI-602 105

APRIL 2025

RAJALAKSHMI ENGINEERING COLLEGE

(an Autonomous Institution Affiliated to Anna University, Chennai)

BONAFIDE CERTIFICATE

Certified that this Project Thesis titled “**ONLINE INTERNSHIP INFORMATION PORTAL**” is the Bonafide work of **YOGESHWARI P (2116241501254)** who carried out the work under my supervision. Certified further that to the best of my knowledge the work reported here in does not form part of any other thesis or dissertation on the basis of which a degree or award was conferred on an earlier occasion on this or any other candidate.

Mr .U .KUMARAN, M.E.,

Assistant Professor (SG),

Department of Artificial Intelligence
and Machine Learning,

Rajalakshmi Engineering College,

Chennai - 602105.

Submitted to Project Viva-Voce Examination held on _____

INTERNAL EXAMINER

EXTERNAL EXAMINER

ACKNOWLEDGEMENT

Initially we thank the Almighty for being with us through every walk of our life and showering his blessings through the endeavor to put forth this report. Our sincere thanks to our Chairman **Mr. S.MEGANATHAN, B.E, F.I.E.**, our Vice Chairman **Mr. ABHAY SHANKAR MEGANATHAN, B.E., M.S.**, and our respected Chairperson **Dr. (Mrs.) THANGAM MEGANATHAN, Ph.D.**, for providing us with the requisite infrastructure and sincere endeavoring in educating us in their premier institution.

Our sincere thanks to **Dr. S.N. MURUGESAN, M.E., Ph.D.**, our beloved Principal for his kind support and facilities provided to complete our work in time. We express our sincere thanks to **Dr. K. SEKAR, Ph.D.**, Professor and Head of the Department of Artificial Intelligence and Machine Learning for his guidance and encouragement throughout the project work. We convey our sincere and deepest gratitude to our internal guide, **Mr. U. KUMARAN**, Department of Artificial Intelligence and Machine Learning for his useful tips during our review to build our project.

YOGESHWARI P (2116241501254)

DEPARTMENT VISION

To promote highly Ethical and Innovative Computer Professionals through excellence in teaching, training and research.

DEPARTMENT MISSION

- To produce globally competent professionals who are motivated to learn emerging technologies and demonstrate innovation in solving real-world problems.
- To promote research activities among students and faculty members that contribute meaningfully to society.
- To instill strong moral and ethical values in professional practice.

PROGRAMME EDUCATIONAL OBJECTIVES(PEO'S)

PEO 1: To equip students with essential background in computer science, basic electronics and applied mathematics.

PEO 2: To prepare students with fundamental knowledge in programming languages, and tools and enable them to develop applications.

PEO 3: To encourage the research abilities and innovative project development in the field of AI, ML, DL, networking, security, web development, Data Science and also emerging technologies for the cause of social benefit.

PEO 4: To develop professionally ethical individuals enhanced with analytical skills, communication skills and organizing ability to meet industry.

PROGRAMME OUTCOMES (POs)

PO 1: Engineering knowledge: Apply the knowledge of Mathematics, Science, Engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO 2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO 3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO 4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO 6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO 7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO 8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO 9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO 10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO 11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

A graduate of the Artificial Intelligence and Machine Learning Program will demonstrate

PSO 1: Foundation Skills: Ability to understand, analyze and develop computer programs in the areas related to algorithms, system software, web design, AI, machine learning, deep learning, data science, and networking

PSO 2: Problem-Solving Skills: Ability to apply mathematical methodologies to solve computational task, model real world problem using appropriate AI and ML algorithms. To understand the standard practices and strategies in project development, using open- ended programming environments to deliver a quality product.

PSO 3: Successful Progression: Ability to apply knowledge in various domains to identify research gaps and to provide solution to new ideas, inculcate passion towards higher studies, creating innovative career paths to be an entrepreneur and evolve as an ethically social responsible AI and ML professional.

COURSE OBJECTIVE

- To identify and formulate real-world problems that can be solved using Artificial Intelligence and Machine Learning techniques.
- To apply theoretical and practical knowledge of AI/ML for designing innovative, data-driven solutions.
- To integrate various tools, frameworks, and algorithms to develop, test, and validate AI/ML models.

- To demonstrate effective teamwork, project management, communication skills through collaborative project execution.
- To instill awareness of ethical, societal, and environmental considerations in the design and deployment of intelligent systems.

COURSE OUTCOME

- **CO 1:** Analyze and define a real-world problem by identifying key challenges, project requirements and constraints.
- **CO 2:** Conduct a thorough literature review to evaluate existing solutions, identify research gaps and formulate research questions.
- **CO 3:** Develop a detailed project plan by defining objectives, setting timelines, and identifying key deliverables to guide the implementation process.
- **CO 4:** Design and implement a prototype or initial model based on the proposed solution framework using appropriate AI tools and technologies
- **CO 5 :** Demonstrate teamwork, communication, and project management skills by preparing and presenting a well-structured project proposal and initial implementation results .

CO-PO-PSO Mapping

CO	PO 1	P O 2	P O 3	P O 4	P O 5	P O 6	P O 7	P O 8	P O 9	P O 10	P O 11	P O 12	PS O 1	PS O 2	PS O 3

SUSTAINABLE DEVELOPMENT GOALS

SDG	GOAL	JUSTIFICATION
 SDG-4	Quality Education	Education drives progress on other SDGs, breaks poverty cycles, and promotes peace and inequality reduction.
 SDG-8	Decent Work and Economic Growth	Necessary for social stability, shared prosperity, and combating poverty.
 SDG-9	Industry, Innovation, and Infrastructure	Infrastructure is vital for economic growth and stability. It acts as a poverty reduction tool through job creation and provides technological solutions to environmental challenges.
 SDG-17	Partnerships for the Goals	Given the interconnected nature of the SDGs, success requires collaborative action, global resource sharing, and bridging the immense financing gap faced by developing nations.

ABSTRACT

The Online Internship Information Portal is a modern web-based platform designed to simplify and enhance the process of discovering, applying for, and managing internships for students and fresh graduates. In today's competitive environment, students often struggle to find relevant internship opportunities due to scattered information, lack of proper guidance, and inefficient application processes. This project addresses these challenges by providing a centralized, user-friendly, and interactive system where users can explore various internship opportunities across multiple domains such as Web Development, Data Science, and Artificial Intelligence. The portal is developed using frontend technologies including HTML, CSS, and JavaScript, focusing on creating an attractive and responsive user interface that delivers a smooth user experience. The system includes essential modules such as user registration and login, internship listing, application form submission, payment processing simulation, and application status tracking. Users can create their own accounts, log in securely, browse available internships, and apply by filling out detailed forms. The system also stores user data locally using browser storage, enabling dynamic interaction without requiring a backend server.

One of the key features of the portal is its step-by-step workflow, which guides users through the entire internship process, including application submission, payment confirmation, interview scheduling, and offer generation. The platform also includes additional pages such as success confirmation, status tracking, and feedback sections, making it closely resemble real-world internship systems used by companies. Visual enhancements such as background videos, animations, loaders, and typing effects are integrated to improve engagement and provide a professional look and feel.

In conclusion, the Online Internship Information Portal serves as a complete and efficient solution for managing internship-related activities in a digital environment. It not only reduces manual effort and time consumption but also enhances transparency and accessibility for users. The project demonstrates the practical application of web development technologies in building a real-world system and provides a strong foundation for further enhancements such as AI-based recommendations, company dashboards, and cloud integration.

CHAPTER 1

INTRODUCTION

1.1 General

The Online Internship Information Portal (InternHub) is a web-based application designed to simplify the process of finding and applying for internships. In the current competitive environment, students often struggle to identify suitable internship opportunities due to scattered information across multiple platforms such as websites, social media, and personal references. This creates confusion, consumes time, and reduces efficiency in the internship search process.

The application is developed using HTML, CSS, and JavaScript, which are widely used technologies for frontend development. Instead of using a traditional backend database, the system utilizes LocalStorage to store user data, login credentials, and application details within the browser. This approach demonstrates how real-world systems function while keeping the implementation simple and efficient.

1.1.1 User Registration & Login System

The User Authentication System is responsible for providing secure access to the internship portal. It allows users to create an account by entering details such as name, email, username, and password. Once registered, users can log in using their credentials.

The system verifies login details using LocalStorage, ensuring that only authorized users can access the application features. This module helps maintain user-specific data such as applications and profile information. It also improves security by preventing unauthorized access and ensures a personalized experience for each user.

1.1.2 Internship Listing Module

The Internship Listing Module displays all available internship opportunities in various domains such as Web Development, Data Science, and Artificial Intelligence. Each listing includes details like duration, cost, and description. This module is designed using dynamic UI components that present information in a structured and visually appealing format. It allows users to browse and compare internships easily, helping them select the most suitable option based on their interests and career goals.

1.1.3 Application Submission System

The Application Submission System enables users to apply for internships by filling out a form with required details. The system collects and stores application data using LocalStorage. This module ensures that users can complete the application process quickly and efficiently. It also provides confirmation after successful submission, making the process smooth and user-friendly.

1.1.4 Payment Processing Module

The Payment Processing Module simulates the process of paying for an internship program. Users are required to enter basic payment details such as card number or UPI information. Although it is a simulated system, it replicates real-world payment workflows and provides users with a realistic experience. This module helps demonstrate how online payment systems function in actual applications.

1.1.5 Status Tracking System

The Status Tracking System allows users to view the progress of their internship application. It displays different stages such as applied, under review, and selected.

This feature improves transparency and keeps users informed about their application status, which is an essential component of real-world internship platforms.

1.1.6 Data Validation and Error Handling

The Data Validation and Error Handling module ensures that all user inputs are correct and complete before processing. It checks fields such as email format, password confirmation, and required inputs. JavaScript is used for client-side validation, and user-

friendly error messages are displayed to guide users. This improves the reliability and usability of the system.

1.2 OBJECTIVES

The main objective of the Online Internship Information Portal is to develop a user-friendly and efficient platform that simplifies the process of finding and applying for internships. The specific objectives include: To provide a centralized platform for internship opportunities, To enable secure user registration and login, To allow users to browse and apply for internships easily, To simulate real-world application and payment processes, To provide application tracking functionality, To enhance user experience through modern UI/UX design.

1.3 EXISTING SYSTEM

The existing system for finding internships is fragmented and inefficient. Students rely on multiple sources such as job portals, social media, and personal connections. This leads to duplication of effort and difficulty in finding reliable opportunities. Many platforms lack proper application tracking systems and user-friendly interfaces. Users often do not receive timely updates about their applications, which creates uncertainty. Additionally, some systems are not well-organized, making it difficult to navigate and find relevant internships. These limitations highlight the need for a centralized, efficient, and user-friendly system.

1.4 PROPOSED SYSTEM

The proposed system provides a centralized web-based solution for managing internship-related activities. It integrates all functionalities such as registration, login, internship browsing, application submission, payment simulation, and status tracking into a single platform. The system improves user experience by offering a clean interface, faster navigation, and organized information.

It ensures better data handling and provides a structured workflow similar to real-world applications. The proposed system overcomes the limitations of the existing system by

improving accessibility, efficiency, and transparency. It also provides a scalable foundation for future enhancements such as backend integration and real-time database management.

CHAPTER 2

LITERATURE SURVEY

2.1 OVERVIEW

The Online Internship Information Portal is designed to provide a complete digital solution for students to explore, apply for, and manage internship opportunities through a centralized web-based platform. The system integrates multiple functional modules such as user authentication, internship listing, application submission, payment processing, and application status tracking to ensure a smooth and structured workflow.

The application is developed using frontend technologies such as HTML, CSS, and JavaScript, focusing on responsive design, smooth navigation, and enhanced user experience. Advanced UI features such as animations, background videos, loaders, and dynamic transitions are incorporated to make the system visually appealing and professional. Data handling is currently managed using browser-based storage (localStorage), which simulates real-time data interaction without requiring a backend server..

MAJOR AREAS OF FOCUS – Online Internship Information Portal

1. Automation of Internship Application Process

The system replaces manual internship searching and application methods with an automated digital platform. It allows users to explore internships, apply online, and track progress, thereby saving time and reducing manual effort.

2. User Authentication and Data Management

The system replaces manual internship searching and application methods with an automated digital platform. It allows users to explore internships, apply online, and track progress, thereby saving time and reducing manual effort.

3. User Interface and Experience (UI/UX)

The system emphasises modern UI/UX design principles in smooth animations, interactive elements, and responsive design.

2.2 LITERATURE SURVEY

Patel, A., & Mehta, R. (2018) - “Automation of Recruitment and Internship Systems using Database Management.” This study emphasizes the role of database-driven systems in managing recruitment and internship processes. The authors developed a system using structured databases to store user profiles, job listings, and application records. The system improved efficiency by reducing manual errors and enabling faster data retrieval.

Sharma, P., & Gupta, S. (2019) – “Web-Based Job and Internship Portal.” This research proposed a web-based application that allows users to search for internships and apply online. The system was developed using web technologies and integrated with a backend database to manage user information and applications. The study highlights improved accessibility and ease of use for students.

Kumar, V., & Reddy, D. (2020) – “Cloud-Based Career Management System.” This study introduced a cloud-based platform for managing job and internship opportunities. The system stores data on cloud servers, ensuring scalability, real-time access, and data security. The research highlights the advantages of cloud computing in modern web applications.

Anitha, M., & Thomas, J. (2021) – “Mobile Application Internship Application System.” The authors developed a mobile application that allows students to search and apply for internships directly from their smartphones. The study shows the increasing demand for mobile-friendly platforms and emphasizes the importance of responsive design.

CHAPTER 3

PROBLEM FORMULATION AND OBJECTIVES

3.1 Problem Statement

In today's competitive world, students and fresh graduates face significant challenges in finding suitable internship opportunities. Most internship information is scattered across multiple platforms such as websites, social media, and college notice boards, making it difficult for students to access reliable and organized information in one place. This lack of a centralized system creates confusion and increases the time required to search for relevant opportunities.

Therefore, there is a need for a centralized and automated system that simplifies the process of searching, applying, and tracking internship opportunities. The Online Internship Information Portal addresses these issues by providing a unified platform where users can explore internships, apply easily, and monitor their application status in a structured and transparent manner. The system enhances user experience, reduces manual effort, and improves overall efficiency for both students and organizations.

3.2 Objectives of the System

The main objective of the **Online Internship Information Portal** is to develop a web-based platform that simplifies and streamlines the process of finding and applying for internships. The system aims to provide a user-friendly and efficient environment where students can explore opportunities, submit applications, and track their progress easily.

The specific objectives of the system include:

- To provide a centralized platform where students can access various internships.
- To develop a secure user authentication system that allows user to register.
- To allow users to apply for internships through an online application form.
- To enhance user experience through an attractive modern UI/UX design principles.

CHAPTER 4

SYSTEM DESIGN

4.1 Introduction

System design is a crucial phase in software development where the overall structure, components, and workflow of the system are planned. It defines how different modules interact with each other and how data flows throughout the application. A well-designed system improves efficiency, usability, scalability, and maintainability.

The Online Internship Information Portal is designed as a web-based application that allows users to register, explore internship opportunities, apply online, and track their application status. The system provides a structured workflow that guides users through different stages such as application submission, interview process, offer generation, and final selection. However, it can be extended to a full client-server architecture where a backend server processes requests and stores data in a centralized database.

4.2 System Architecture

Components of the System :

1. Presentation Layer (Frontend)

This is the user interface through which users interact with the system. It is developed using web technologies such as HTML, CSS, and JavaScript.

- Allows users to register and login
- Enhance users to fill and submit application forms
- Display application status and progress updates
- Handles navigation between pages(signup,login,apply,status,payment,etc.)

2. Application Layer (Logic Processing)

This layer handles the business logic of the system and processes user requests.

- Validates user inputs
- Processes internship applications

- Stimulates payment processing
- Updates application status dynamically
- Handles error messages and alerts

3. Data Layer (Storage System)

This layer is responsible for storing and managing all data related to the system.

- Stores user details, bus schedules, routes
- Maintains internships application
- Track application status for each user

Working of the System

- The user accesses the system through a web browser.
- The user registers and logs into the portal.
- The system validates user credentials and stores user data.
- The user browses available internships and selects one.
- The user track the application status through different stages.
- The user selects seats and makes payment.
- The system updates and displays the final result (selected/rejected).

4.3 Database Design

Database design is an essential part of system development that focuses on organizing and structuring data efficiently. It ensures proper storage, retrieval, and management of data while maintaining consistency and reducing redundancy. The Online Internship Information Portal currently uses browser-based storage to manage data. This approach allows the system to simulate real-time data operations without requiring a backend server.

4.4 System Requirements

System requirements define the hardware and software resources needed to run the application successfully.

4.4.1 Hardware Requirements

The system does not require high – end hardware and can run on standard systems.

- Processor: Intel Core i3 or higher
- RAM: Minimum 4 GB
- Storage: 250 GB Hard Disk or SSD
- Input Devices: Keyboard and Mouse
- Internet Connection

4.4.2 Software Requirements

The system is developed using commonly available software tools and technologies.

- Operating System: Windows 10 or later
- Frontend Technologies: HTML, CSS, JavaScript
- Storage Mechanism: Browser localStorage
- Development Environment: Visual Studio Code
- Web Browser: Google Chrome or any modern browser

CHAPTER 5

SYSTEM IMPLEMENTATION

5.1 System Methodology

The Online Internship Information Portal is implemented as a web-based application that allows users to access the system through a web browser. The development of the system focuses mainly on frontend technologies, providing an interactive and visually appealing user experience without requiring a complex backend server.

The frontend of the system is developed using HTML, CSS, and JavaScript. HTML is used to structure the web pages, CSS is used for styling and layout design, and JavaScript is used to implement dynamic functionality such as form validation, animations, page navigation, and data handling.

The system follows a modular approach, where each functionality is divided into separate modules such as user authentication, internship browsing, application submission, payment processing, and status tracking. This improves the maintainability of the system and allows easy future enhancements such as integrating backend technologies like Node.js and databases like MySQL.

5.2 Module Descriptions

The Online Internship Information Portal consists of several modules that work together to provide a complete internship application experience.

5.2.1 User Authentication Module

This module handles user registration and login functionality.

- Allows users to create an account and login securely
- Validates user credentials
- Maintains user session

The 'Create Account' form features a dark theme with a rocket icon at the top left. It includes fields for First Name (Rahul), Last Name (Sharma), Username (rahul_sharma), Email Address (you@email.com), Password (Min. 8 characters), Confirm Password (Repeat password), College / University (e.g. IIT Bombay), and Current Year (Select year). A prominent blue 'Create Account' button is at the bottom, followed by a disclaimer and a 'Sign In' link for existing users.

5.2.2 Internship Browsing Module

This module enables users to explore for internship opportunities.

- Show details such as internship title, description, and cost
- Allows user to select a preferred internship
- Redirect user to the application page

5.2.3 Application Module

This module manages the internship application process.

- Validates all input fields before submission
- Stores application data in local Storage
- Prevents submission of incomplete or invalid forms

The screenshot shows the 'Internship Application' form. At the top, it says 'Fill in your details carefully. Our team reviews applications within 24 hours.' Below this is a progress bar with four steps: 1. Application (active), 2. Interview, 3. Offer, and 4. Payment. The form is divided into sections. The first section is 'Select an Internship' with a link to 'Browse internship listings on the home page'. The second section is 'Personal Information' and contains the following fields: Full Name * (with placeholder 'Enter your full name'), Date of Birth * (with placeholder 'mm/dd/yyyy' and a calendar icon), Email Address * (with placeholder 'your@email.com'), Phone Number * (with placeholder '+91 98765 43210'), and Full Address * (with placeholder 'House No, Street, City, State, PIN').

5.2.4 Payment Module

This module manages the payment process.

- Collects payment details
- Validates payment inputs
- Display payment processing experience

The screenshot displays the 'Payment Module' interface. On the left, under 'Select Payment Method', there are buttons for UPI, Card, Net Banking, and Wallet. Below these, a section titled 'Select your preferred UPI app' shows icons for GPay, PhonePe, Paytm, BHIM, Amazon, and Other. A UPI ID field contains 'yourname@upi'. A large blue button says 'Pay ₹3,539 →'. A security note at the bottom states: 'Your payment is secured by 256-bit SSL encryption. We do not store your card details.' On the right, the 'Order Summary' section lists: Program (Select an Internship), Company (Browse Internship listings on the home page), Duration (1 Month), Mode (Online), Program Fee (₹2,999), Registration Fee (₹0 (Waived)), GST (18%) (₹540), and Total Payable (₹3,539). A green box below the summary lists inclusions: 'Includes: Mentorship, Certificate, Money-Back Guarantee (time access to 100% refund within 3 days of enrollment if not satisfied)'.

5.2.5. Payment Confirmation Module

The screenshot displays the 'Payment Confirmation Module' interface. At the top, a green checkmark icon is shown above the text 'Payment Successful!'. Below this, a welcome message says: 'Welcome to InternHub! Your enrollment is confirmed. 🎉' and 'Welcome, Ila! Your seat is confirmed.' The 'Transaction Details' section shows: Transaction ID (TDH1777361856292), Amount Paid (₹3,539), Payment Method (UPI), Date & Time (28 Apr 2026, 12:54 pm), and Status (Paid). Below this, a section titled 'You're now enrolled in' shows 'Select an Internship' with a link to 'Browse internship listings on the home page' and buttons for '1 Month', 'Online', and 'Certificate Included'. The 'What Happens Next?' section lists: 'You'll receive a confirmation email within 30 minutes.', 'Your mentor will contact you within 24 hours.', 'Login details for the learning portal will be shared.', and 'The first session starts as per your chosen timing.' At the bottom, there are buttons for 'My Dashboard →' and 'Back to Home'. A footer note states: 'A payment receipt has been sent to your registered email address.'

5.2.5 Status Tracking Module

This module users to track their application processes,

- Updates status dynamically
- Provides clear without visualization
- Enhances transparency in the system

The image shows a confirmation screen for a submitted application. At the top, there is a green checkmark icon. Below it, the text "Application Submitted!" is displayed in a large, bold font. Underneath, a message says "Hi Lia! Your application is now under review." A box contains the "YOUR APPLICATION ID" as "IH91325369" with a note to "Save this ID for tracking your application status". Below this, a table lists application details: Applicant Name (Lia), Applied For (Frontend Developer Intern), Company (TechNova), Submitted On (28 April 2026), and Status (Under Review). A section titled "What Happens Next" lists four steps: Application Review (24hrs), Interview/Test Round, Offer Letter, and Program Begins, each with a brief description. At the bottom, there are two buttons: "Track Status -->" and "Interview Round".

Applicant Name	Lia
Applied For	Frontend Developer Intern
Company	TechNova
Submitted On	28 April 2026
Status	Under Review

What Happens Next

- Application Review (24hrs)**
Our team reviews your profile and documents
- Interview/Test Round**
A short online test or HR call to assess your skills
- Offer Letter**
Get your official internship offer letter
- Program Begins**
Complete enrollment payment and start your internship!

CHAPTER 6

RESULTS AND DISCUSSION

6.1 Results

The Online Internship Information Portal was successfully developed and tested as a web-based application. The system provides a complete platform for students to register, explore internship opportunities, apply for internships, and track their application status in a structured and user-friendly manner.

During testing, the system performed efficiently in handling user registration, login, internship browsing, application submission, and payment simulation. Users were able to create accounts, log in securely, and access available internship opportunities without any issues. The application form allowed users to enter their details, and proper validation ensured that only correct and complete information was submitted.

The payment module successfully simulated the payment process and redirected users to the confirmation page. After completing the application, users were able to view their application status through different stages such as Applied, Under Review, Interview, and Selected. The system stored user and application data using browser local Storage, ensuring that the data was retained and accessible throughout the session.

6.2 Performance Evaluation

The performance of the Online Internship Information Portal was evaluated based on usability, responsiveness, and accuracy. The system provides a simple and intuitive user interface, allowing users to easily navigate between different pages such as signup, login, internship listing, application, payment, and status tracking. The use of JavaScript ensures smooth interaction and real-time validation of user inputs.

Since the system is developed using frontend technologies and local Storage, it does not depend on server-side processing. This results in faster response time and quick execution of operations such as login validation, data storage, and page navigation.

Testing showed that the system performs well under normal usage conditions. All modules, including authentication, application submission, and status tracking, worked

correctly without errors. The data was stored and retrieved accurately using local Storage.

The modular design of the system allows easy scalability. Future integration with backend technologies such as Node.js and MySQL can further improve performance, support multiple users, and enable real-time data management.

6.3 Resource Utilization

The Online Internship Information Portal is designed to be lightweight and efficient, requiring minimal system resources.

The application uses basic web technologies such as HTML, CSS, and JavaScript, which do not require high processing power or memory. Since the system uses browser-based storage (local Storage), it eliminates the need for a dedicated database server in the current implementation.

The system runs smoothly on standard computers and does not require additional software installation. Users can access the portal directly through a web browser, making it highly convenient and accessible.

Memory usage is minimal, as the data stored in local Storage is lightweight and limited to user and application details. The absence of backend processing reduces server load and ensures faster performance.

consumption.

CHAPTER 7

CONCLUSION AND FUTURE WORK

7.1 Conclusion

The Online Internship Information Portal was developed to provide a simple, efficient, and user-friendly platform for managing internship-related activities. The system replaces traditional methods of searching and applying for internships with a centralized digital solution.

The application allows users to register, log in, explore internships, submit applications, and track their progress through different stages. The use of frontend technologies ensures a responsive and visually appealing interface, while localStorage enables effective data management without requiring a backend system.

The system successfully reduces manual effort, improves transparency, and enhances user experience by providing a structured workflow for internship applications. Features such as validation, animations, and status tracking contribute to the overall efficiency and usability of the system.

7.2 Future Work

The Online Internship Information Portal can be further improved by integrating advanced features and technologies to enhance its functionality and scalability.

In future, the system can be connected to a backend server using technologies such as Node.js and MySQL to enable real-time data storage, multi-user access, and better security. An admin panel can be developed to manage internships, user data, and applications more efficiently. The portal can also include features such as email and SMS notifications to keep users updated about their application status. Additionally, a mobile application version can be developed to improve accessibility and user convenience. Advanced features like resume upload, automated screening, and AI-based internship recommendations can further enhance user experience by providing personalized opportunities. Integration of secure payment gateways can replace the current simulation with real transactions. Overall, these enhancements will make the system more robust, scalable, and suitable for real-world deployment.

APPENDICES

Appendix-1: Source Code Pseudocode

System Overview:

The Online Internship Information Portal is developed to simplify and manage the process of searching, applying, and tracking internships through a structured and user-friendly web application. The system provides secure user authentication, allowing users to register and log in using their credentials. The status tracking module allows users to monitor the progress of their application through different stages such as Applied, Under Review, Interview, and Selected. The frontend of the system is implemented using HTML, CSS, and JavaScript, providing an interactive and responsive user interface.

CONCLUSION:

The Online Internship Information Portal was successfully designed and developed to provide a simple, efficient, and reliable platform for managing internship-related activities. The system replaces traditional methods of searching and applying for internships with a digital solution that allows users to explore opportunities, submit applications, and track their progress easily.

The application enables users to register, log in, browse internships, and apply through a structured process. It ensures proper handling of user and application data using browser-based storage, providing a smooth and uninterrupted user experience.
